Start of AutoCAD Programming In 1993, when AutoCAD was first introduced to the marketplace, the first general-purpose AutoCAD programming interface was introduced,.NET, by KwikFX, Inc. This API is no longer maintained but was replaced with ObjectARX which was introduced in October 2005. In the past years, there have been multiple attempts to create a programming interface that is based on the Windows API or other frameworks such as Boost.Python, and CoreCLR. AutoCAD's original architecture was that it was a loosely-coupled assembly of components written by third parties. When Autodesk launched the 2009 version of AutoCAD, they decided to move the core of AutoCAD into an application framework written in C++ called the ObjectARX framework. In 2010, Autodesk used the C++ toolkit Clang to build AutoCAD. Clang is a compiler toolchain for the C/C++ programming language family. Platform independence AutoCAD is designed to run on many platforms, from handheld to rack-mounted, desktops to cloud-based platforms. When Autodesk first released AutoCAD, it was designed to run on Microsoft Windows. It has also run on various Unix flavors. By the early 2000s, it was moving to Unix platforms. As of AutoCAD 2013, AutoCAD runs on Linux and macOS. Interoperability with other systems AutoCAD can be

installed on a PC and used on a Mac computer, since they both use the same file format. AutoCAD can also be used on a web browser, but the only officially supported web browser is Firefox. AutoCAD has a plugin available for Internet Explorer, called IEPlug, but it is not supported by Autodesk. Third-party development of AutoCAD plugin on non-Windows platforms is common. Most of these solutions are command-line interfaces. For example, AutoCAD LT is based on MATLAB, while AutoCAD TE can be used on Linux, Mac, and Windows. AutoCAD Architecture can be used on Unix, Macintosh and Windows. AutoCAD can be used with any other Autodesk software, including AutoCAD Mechanical.
