The object-oriented programming language The ObjectARX API for AutoCAD is the programming language that AutoCAD is written in. It is an ObjectARX-based API for AutoCAD. ObjectARX was originally developed as a plugin language for AutoCAD. In 1997 Autodesk acquired many third-party developers who had developed plugins, and who now work on extending AutoCAD using ObjectARX. AutoLISP AutoLISP is a scripting language (ad hoc data structure) of AutoCAD, and is used for developing plug-ins. A script or a plug-in can be created by a user. AutoLISP's structure and its associated APIs are defined using the Autodesk's ObjectARX API. The ObjectARX API is an object-oriented programming language. However, AutoLISP itself is not object-oriented; the object model is defined using the sequence of statements which use the data structure of objects. AutoLISP supports a small number of object-oriented programming features including properties, methods, inheritance, multiple inheritance, polymorphism, and overriding. The source code of AutoLISP is integrated with C/C++. However, the data structure is defined in the AutoLISP source code. AutoLISP supports two types of interfaces. The first type is a command interface which includes the methods that are used to execute the commands of the program. This type of interface was introduced with AutoLISP 4. The second type is a user interface which can be used to create the object model of the program. For example, the user interface displays the data and behavior of the object model. In some interfaces, a command can be executed when the mouse is clicked. This can be used to create menus or toolbars. These interfaces are called "Command User Interfaces" (CUIs). AutoLISP allows users to create their own command objects by modifying the "commands.commands" dictionary. This dictionary is a list of all the commands of the program. Visual LISP AutoCAD supports a similar programming language, called Visual LISP (VLS), which is also written in AutoLISP. Visual LISP is a script language that can be executed in the same manner as AutoLISP. Many AutoLISP users switched to V 5b5f913d15

Interactive artboards: Create complex diagrams faster, without sacrificing graphical quality. AutoCAD's artboards automatically place each graphic onto its own layer, or stack, allowing you to zoom and scroll through an artboard in a single window. And, you can easily access each layer's properties, including Opacity, Outline Style, and effects, for more design control. (video: 1:38 min.) Project and Zoom/Pan: Easily reorganize large drawings to move and hide the largest elements to enhance efficiency and accuracy. There are no more layers or tabs to navigate, so it's easier to plan, create and execute any design change. Streamlined Drawing Controls: Get the results you're looking for faster with improved controls, including Track Selection and Advanced Feature Creation. For greater precision, you can quickly create surfaces, curves, and arcs. (video: 1:21 min.) Vectorize Objects: Modify your work more easily. After using object snapping to align points, you can easily crop and splice existing lines to customize the design, and easily convert those lines to curves. Additional Listing of features in the February 2019 issue of CAD Technician Magazine: 2023 features new interactivity and design tools to speed up the design process for you.
