

Embedded Programming is the art of programming an embedded system with a hardware description language such as Verilog, VHDL, or C. The project must be specified in the Hardware Abstraction Layer (HAL) as well as its input and output signals. Normally, user has to write some software to be used for accessing HAL's interface. The software is called the application program. It consists of two major components: the C library which acts as the between-level API and is usually called the "kernel driver". The C library is a set of functions to access hardware peripherals. In C language, the kernel driver is the "user driver" which is a set of functions to access the HAL interface. IAR Embedded Workbench for ARM allows you to develop C programs using the IDE. It helps you to debug, export, and run the applications. You can create and debug the C programs on Embedded Platform which has an ARM Cortex-M processor. IAR Embedded Workbench for ARM is the complete embedded development solution for ARM. IAR Embedded Workbench supports OpenOCD, the OpenOnLine ARM Architecture Reference Manual for Cortex-M is a proprietary register-level reference manual for 32-bit ARMv7-M and RTE. It includes reference models, descriptions of ARMv7-M RTE and RTE, core, bus features and differences, optimization hints, optimization models in Verilog/VHDL, etc. The latest version of the manual is available through OEDTA-ARM library. All the manuals can be found in the OpenOCD product page. OpenPIV (Open Physical Layer (OPIV)) includes the PHY and MAC of the 802.11, 802.11n, WiMAX, and LTE standards, and the IEEE 802.11 standard. OpenADC (Open Analog-to-Digital converter), which is an analog front-end and multi-rate digital-to-analog converter (DAC). An Open ADC can be used for analog audio, pulse width modulation (PWM) and phase shift keying (PSK) applications. OpenBoard (Open Board) is a software development platform for embedded systems, and consists of a C compiler, library and IDE. It can be used for ARM Cortex-M based target processor and is suitable for any-level software programmer. The product is a free download from this site.
